

Marine Battery Selection Guide

To avoid becoming a maritime statistic it is important to understand the power needed to run on-board accessories and still have sufficient capacity to start the engine and get you home at the end of the day.

PRODUCT ID	BATTERY DESCRIPTION	BATTERY TYPE	WARRANTY MONTHS	VOLTS	COLD CRANK AMPS (CCA) @ -18°C	RESERVE MINS (RC) @ 25°C	AH	NOMINAL OVERALL DIMENSIONS (MM)				POLARITY	TERMINAL TYPE

* Not recommended for deep cycling applications. # Dedicated Deep Cycle battery & dual battery system recommended in larger marine craft.

Deep Cycle Batteries

The heavy power requirements of some on board electrics and system set ups may require a dual battery system which runs a dedicated starting battery and a deep cycle battery in conjunction with each other. This allows the starting battery to be used for cranking over high compression engines and then isolated when the engine is switched off, enabling the deep cycle battery to power on-board accessories.

Century Batteries has an extensive range of Flooded, AGM (Absorbed Glass Mat) and Gel Deep Cycle batteries available, ideal for use in marine dual battery systems.

For more information on Century Deep Cycle batteries ask for a copy of the Century Deep Cycle product brochure or speak to your local Century Marine battery specialist.

Batteries that last and last

MARINE BATTERIES FOR ALL YOUR POWER NEEDS

Century has the power for all your needs!

Century Marine Pro batteries are specially designed to handle the rigours of pounding from heavy seas and deliver reliable starting power and performance

Unlike Automotive batteries which provide short sharp concentrated bursts of power to start the vehicles engine, marine batteries are not only required to deliver sufficient starting power for high compression engines but also provide the extra reserve capacity needed to run on-board accessories, even when the engine is switched off and the battery is being drained.

You're responsible! Don't risk your safety and that of those on board by using unsuitable, inferior quality batteries.

The Century Marine Pro range includes a comprehensive selection of superior batteries which incorporate advanced design features and specialist hard wearing internal components to handle the rigours associated with recreational and industrial marine applications.

The range includes low maintenance and maintenance free dedicated marine starting batteries plus a range of dual purpose starting and deep cycle batteries with the extra reserve capacity to run on-board accessories.

Proven Performance

Century Batteries have been manufacturing and supplying batteries in Australia since 1928 and in this time have developed the engineering expertise and state of the art manufacturing processes to design and produce a range of marine batteries better suited to Australia's extreme climate and harsh conditions.

Complete peace of mind

The complete Century Marine Pro range is backed by a fully comprehensive nationwide warranty and supported by one of Australia's most extensive sales and distribution networks. This protects your battery against faulty materials and workmanship for up to 24 months.

Battery Recycling

Disposing of your used marine batteries is easy!

Simply return your used battery to the store you purchased it from or return it to your nearest Century Yuasa approved Battery Recycling Centre.

Visit recyclemybattery.com.au or call 1300 650 702 to find your nearest centre.

insist on **Marine Pro** Batteries

Marine Pro 720 The ultimate marine battery, perfectly adapted to life on the water. A dual purpose battery designed to provide starting power up to 350HP and the deep cycling capability to run on-board accessories. Built to combat wave pounding and engine vibration, plus extra thick battery plates and active material for extra starting power and reserve capacity.

Marine Pro 650 Perfect for boats with engines up to 115HP, with sufficient reserve capacity to operate many basic electrics and features Platelock™ technology to combat the effects of wave pounding and engine vibration.

Marine Pro 580 Ideal for smaller trailer boats with engines up to 45HP, the Marine Pro 580 has the capacity to operate basic electrics and incorporates Century's exclusive Platelock™ technology to combat wave pounding and engine vibration.

Marine Pro HD Batteries offer the ultimate in performance for heavy duty marine applications. Incorporating some of the toughest internal components in the industry, the Marine Pro HD provides both starting and cycling power, for both industrial and recreational vessels.

Marine Pro MF A range of sealed, maintenance free batteries designed to provide reliable starting power for high compression engines up to 350HP and sufficient reserve capacity for running basic marine electrics.

Marine Pro Cruiser Low maintenance, heavy duty starting batteries designed for use in larger marine crafts. The range features stronger internal components, specialist separators and thicker plates to withstand vibration and provide reliable performance in extreme operating conditions.

TYPE	APPLICATION (STARTS UP TO)	CCA	RESERVE CAPACITY
MARINE PRO 580 - (D23RM)	45HP + BASIC ELECTRICS	580	105 MIN
MARINE PRO 650 - (NS70M)	115HP + BASIC ELECTRIC	650	140 MIN
MARINE PRO MF - (NS70MMF)	115HP + BASIC ELECTRICS	500	110 MIN
MARINE PRO MF - (N70ZMMF)	350HP + BASIC ELECTRICS	660	150 MIN
MARINE PRO 720 - (N70ZM)	350HP + BASIC ELECTRICS + 2 OPTIONAL ELECTRICS	720	190 MIN

BASIC ELECTRICS	OPTIONAL ELECTRICS
1. CONTROL INSTRUMENTS	1. EXTRA LIGHTING
2. STANDARD LIGHTING	2. GPS
3. BILGE PUMP	3. FISH FINDER
4. UHF/VHF RADIO	4. AUTO PILOT
	5. TRIM TABS
	6. FRIDGE
