business

The MDX-P300 provides a quick, simple and accurate battery electrical system testing solution for the professional. Suitable for use in the workshop or field the MDX-P300 offers multi testing capabilities including state of health, cranking performance, bad cell detection plus starter and charging system analysis. Easy to use, it delivers test results in seconds for 12V car and light commercial batteries and electrical systems.

Review test results on the spot with your customers using the integrated printer, for increased preventative battery maintenance and enhanced customer service levels.

MIDTRONICS

Midtronics battery testers are recognised worldwide as the standard for determining battery condition. The patented conductance technology is the preferred test method for battery warranty decisions for automotive dealerships and vehicle manufacturers around the world.

Description	MDX-P300 Automotive Tester
Part Number	23973
Products Tested	Automotive, Marine, Lawn & Garden
Testing Functions	12V, 12V charging systems, starter & alternator testing.
