

Power to save you fuel and cut emissions[^]

Century Ultra Hi and Hi Performance batteries are the latest in battery design and technology, incorporating revolutionary SmartDrive™ technology from CenturyYusa.

Designed for the next generation of petrol, diesel and gas powered motor vehicles fitted with Regulated Charge Control Systems, these batteries can reduce fuel consumption and cut vehicle emissions by up to 2%.

Complete Peace of mind.

Century Batteries have been designing and manufacturing batteries in Australia since 1928. In this time we have developed the engineering know how and manufacturing expertise to develop a range of batteries better suited to Australian conditions.

Our product range is backed by a fully comprehensive nationwide warranty and one of Australia's most extensive sales and distribution networks. This gives you the peace of mind and reassurance that your Century battery is protected against faulty materials and workmanship for up to 36months*.

*Conditions apply, refer to individual warranty statement affixed to each product.

When was your battery last checked? ___ / ___ / ___

Are you confident it won't let you down? YES / NO

The *Smart Driver's Choice!*

Australian made technology for Australian conditions

Australia's Leading Brand

Not all batteries are created equal

Australia's harsh climate, rough roads and tough driving conditions create havoc for batteries, attacking critical internal components which over time can lead to early battery failure.

Many imported or inferior quality batteries are made for softer climates focusing on delivering higher starting power at the expense of more critical design features.

The Ultra Hi Performance range is designed and manufactured in Australia to better suit our hotter climate, extreme conditions and combat the causes of battery failure.

They incorporate industry leading design features, robust hardwearing internal components and some of the most technically advanced materials available in the battery industry to deliver what motorists really want – longer life and ultra reliability.

Power to *save* you fuel and cut emissions.

① **Hybrid Alloy Grid**

Improves strength, reduces plate growth and enhances battery life

② **Radial Grid Design**

Lower electrical resistance for higher starting power and faster recharge

③ **Longer Life Plates**

Thicker cast construction and paste coating of the positive grid to increase battery life

④ **Centre Lug**

Central position for improved current flow and vibration resistance

⑤ **Superior Plate Separation**

Advanced envelope separator material providing increased puncture resistance and protection from short circuit

⑥ **Built in Water Indicator**

For on-the-spot diagnosis of the batteries state-of-charge

⑦ **Hinged Vent Cover**

Enables easy access for maintenance to maximise battery life

⑧ **Mud Rack Design**

Specialist support racks for plates, minimises short circuit and vibration
